Comparisons of Economic Trends in New Jersey and the United States 6

Statistical Section S-1

New Jersey Economic Indicators is published monthly and distributed without charge, to those wishing to receive it, by the New Jersey Department of Labor, Division of Planning and Research, C N 056, Trenton, N. J. 08625-0056. It is prepared with the cooperation of other State and Federal agencies. Material appearing here may be reprinted without permission, but it would be appreciated if appropriate credit was given.

The Economic Situation in

THE NATION

The national economy remained sluggish in June and early July, as continued expansion in the service sectors was mostly offset by a further erosion of industrial production, additional cutbacks of oil and gas extraction and reduced industrial, commercial and office building activity. Employment increased in both June and July, after adjusting for the effects of the AT&T strike, and the nation's jobless rate edged down to 6.9% in July. Job gains have moderated in recent months, however, and unemployment has been stuck at close to the 7% mark for a year and one-half.

According to the U.S. Commerce Department, gross national product advanced at an annual rate of only 1.1% during the second quarter, after climbing at an upward-revised pace of 3.8% during the first three months of the year. All of the second quarter gain was attributable to consumer spending, the housing boom and increased government outlays. Pulling in the other direction were a further increase in the foreign trade deficit (partly because of rising oil imports), a deterioration of business investment in new facilities and a reduced pace of business inventory accumulation.

Industrial production dropped 0.5% in June, bringing its cumulative slippage since January to 2.1%. While part of this decline can be attributed to the effects of reduced crude oil prices on the domestic oil and gas producing industry, there also have been cutbacks across a broad range of product lines including household durable goods, motor vehicles, farm equipment, computers and other types of business equipment and industrial materials. This reflects both a weakening of domestic demand and the continued difficulties manufacturers are facing in international markets.

In contrast to manufacturing and mining, homebuilding has been a significant growth sector of the national economy, with output climbing at an annual rate of 15% during the second quarter. New home construction may be approaching its peak, however. High vacancy rates in some parts of the country are expected to lead to at least some retrenchment of apartment house construction and a recent easing of single family home sales could signal a leveling off in this segment of the industry as well. Though it would be premature to conclude that the expansion has already ended, housing starts did drop somewhat in both May and June. In the latter month, they were at an annual rate of 1,845,000, compared with an average of about two million during the first four months of the year.

The most common expectation among

NOTE:Narrative analysis based upon the most recent data available as of August 1,1986. Tables may contain less current information.

business forecasters is that the national economy will stay on a moderately upward course during the year ahead, with unemployment showing little, if any, improvement. Most analysts are counting on at least some turnaround in the foreign trade situation as a belated response to the drop of more than 25% in the value of the dollar that has occurred since early 1985. This is crucial since domestic consumer spending is expected to grow at a more subdued rate than during the unsustainable borrowing spree of the past several years and the cyclical expansion of homebuilding may be close to its crest. Also, little upward thrust can be expected from business investment in new plant and equipment or from fiscal policy at a time when Congress and the Administration are struggling to trim the budget deficit.

THE STATE

The arrival of the summer vacation period brought with it the usual pick-up of seasonal hiring in New Jersey's recreational activities as well as in construction, retail trade and a broad range of business and personal services. Seasonal expansion was about in line with expectations and, except for continued weakness in manufacturing, the health of the State's economy remained excellent. After removing the influence of purely seasonal developments and discounting the effects of labor disputes, employment was at a record level and unemployment remained well below the national average and the lowest in 16 years.

Nonfarm wage and salary employment slipped by 4,800 between mid-May and mid-June to an estimated 3,504,400, after allowing for normal seasonal hiring. The decline, however, was attributable entirely to labor disputes, which idled about 7,500 workers during the June survey week in contrast to only about 600 a month earlier. Were it not for labor disputes, which included among others the AT&T strike which has since been settled, nonfarm employment would have increased by 2,100.

According to the N.J. Department of Labor's monthly employer survey, hiring continued to exceed seasonal expectations in wholesale and retail trade as well as in finance, insurance and real estate. Gains also were reported in the public sector, in part because of the recruitment of temporary staff to prepare for the Fourth of July festivities commemorating the centennial of the Statue of Liberty. Jobholding edged higher in construction but declined on a seasonally adjusted basis for the fifth month in a row in manufacturing, primarily because of layoffs and/or seasonal hiring shortfalls in machinery, electrical equipment and apparel.

Aside from purely seasonal changes, employment growth has slowed in New Jersey since March, following a steep but unsustainable climb that added about 14,000 workers per month to the economy's payrolls during the autumn and winter months. After adjusting for the increased number of workers temporarily off their companies' payrolls because of labor disputes, nonfarm employment growth

over the last three months has totaled only 5,000, or about 1,700 per month. This tapering off was anticipated and should not be interpreted as a negative signal. Even with the recent pause, jobholding has increased by an impressive 10,000 per month since last September, a growth rate twice as great as that of New Jersey's working-age population. In today's tight job market, employment growth of that magnitude cannot continue in the absence of accelerated migration of new workers into the state.

Thus far in 1986, nonfarm employment growth in New Jersey has tracked national trends very closely. In fact, employment increased by 2.9% in both the state and the nation between the first half of 1985 and the first six months of 1986, with parallel amounts of slippage in manufacturing far more than offset by expansion in the service-producing sectors and construction. This growth rate has roughly matched labor force expansion at the national level, leaving joblessness essentially unchanged at about 7%. In New Jersey, however, it has meant lower unemployment since the State's population and labor force are still growing more slowly than the nation. According to the U.S. Bureau of Labor Statistics, Garden State joblessness averaged 5.3% during the first seven months of 1986, compared with 5.8% during the comparable period a year earlier.

The tightness of New Jersey's job market is reflected not only in its unemployment rate, which thus far in 1986 has been the lowest for any sustained period since 1970, but also in the proportion of the working-age population actively engaged in the labor market. The State's civilian labor force participation rate averaged a record 66.1% in June and July, three-quarters of a percentage point higher than the nation's rate of 65.4% for the comparable period. Even more impressively, the percentage of New Jersey's working-age population with jobs stood at a record 62.7% for the same two months, compared with 60.8% for the nation as a whole.

The tight labor market has resulted in labor shortages in construction and in some trade and service industries, especially those that pay relatively low wages and employ large numbers of youth, who have been entering the labor market in fewer numbers over the past several years. Shortages have been most pronounced in rapidly growing suburban areas, some of which have jobless rates of 3½% or lower, and in resort communities along the shore. At the same time, there remain pockets of double-digit unemployment in some of the State's central cities and in rural Cumberland County, where nearly 9% of the labor force was out of work in June.

The relative well-being of most New Jerseyans during this period of strong economic growth is reflected in a healthy pace of consumer spending and a prevailing mood of optimism about this region's future continues to generate a record volume of new business formations. During the first five months of 1986, sales by New Jersey retail establishments exceeded those for the same period a year earlier by 9.6%, almost all of the increase attributable to increased volume rather than price mark-ups. This was double the nation's retail sales gain of 4.4%. New business incorporations during the January-to-April period (the latest data available) totaled 11,581, up 11.5% from a year earlier compared with an increase of 8.9% nationally.

There is as yet no let-up of New Jersey's construction boom, with employment in this industry holding steady at a record level since the start of the year. Some slippage has been evident in new contracts for nonresidential building and infrastructure projects, which were down 10.6% and 7.9% between the first six months of 1985 and the comparable period this year. This, however, has not yet been translated into a slowdown of current building activity. If and when this does occur, a continued strong demand for new housing should fill the void. Residential contracts during the first half of the year were up 12.9% from their high volume of a year earlier, with a steep increase in commitments for the construction of single-family homes outweighing a decline in the apartment house component.

Manufacturing remains the only sector of the economy in the doldrums, with employment down 8,100 since January (seasonally adjusted) and up only 9,200 from the bottom of the last recession, roughly mirroring national trends. The principal culprit has been the overvalued dollar, which has led to rising imports and reduced the competitiveness of domestic producers in the world marketplace. More recently, the situation has been

exacerbated by a slowdown of domestic demand for consumer durable goods and business equipment in some parts of the country that has inevitably impacted New Jersey manufacturers. The decline of the value of the dollar since early 1985 should at some point spell partial relief on the international front, but the positive impact of this is likely to be dampened by continued sluggishness of domestic demand.

Further expansion of the New Jersey economy should be in the offing for the balance of 1986 and into 1987. Job growth can be expected to be moderate, however, and concentrated mainly in business services, finance, trade and various types of personal service activities. Hiring may pick up in some export-sensitive manufacturing operations, but continued worker displacement in others will probably prevent much of an improvement in the overall factory job situation. Unemployment will most likely remain in the 5% to 5½% range, with total job growth roughly matching the rate of increase of the State's labor force.

Economic Briefs

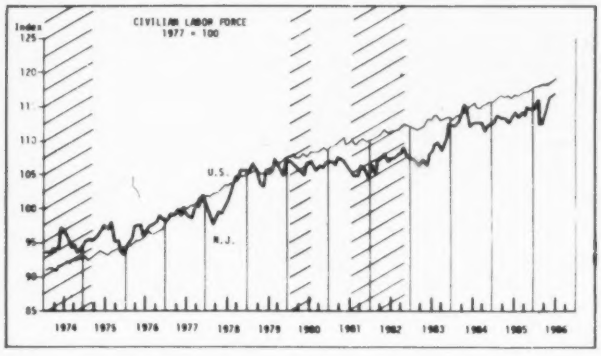
1986 NORTHERN REGIONAL LABOR MARKET REVIEW

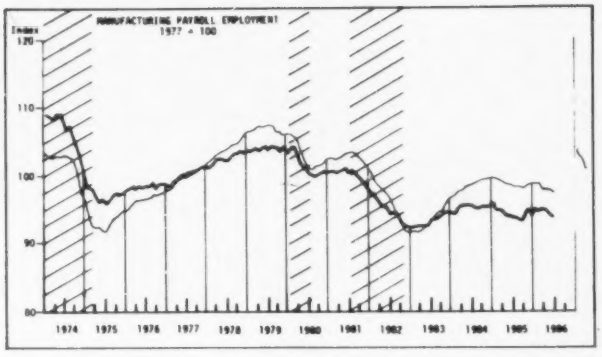
The 1986 edition of the *Northern Regional Labor Market Review* is now available. This easy-to-read annual report analyzes population, housing, income, labor force and employment trends. It also highlights recent economic developments and examines the potential impact on the 11-county Northern New Jersey Region (Bergen, Essex, Hudson, Hunterdon, Middlesex, Morris, Passaic, Somerset, Sussex, Union and Warren counties). Copies may be obtained by contacting the New Jersey Department of Labor, Division of Planning and Research, CN 056, Trenton, NJ 08625 (609) 292-7567.

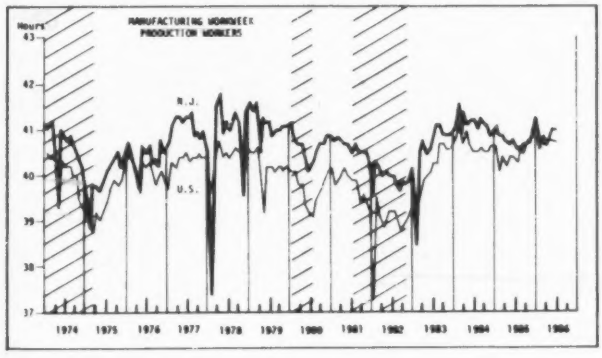
HISTORICAL DATA SERIES AVAILABLE

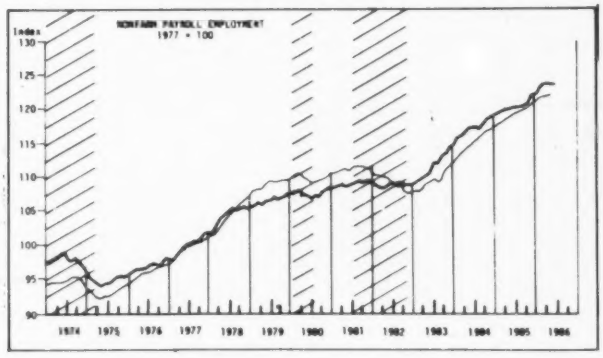
Historical data for each of the 36 N.J. Economic Indicators' series is now available in a booklet. Each series contains both unadjusted and seasonally adjusted data. A graph is also included to interpret long-term trends. Copies may be obtained by contacting the New Jersey Department of Labor, Division of Planning and Research, CN 056, Trenton, NJ 08625 (609) 292-7567.

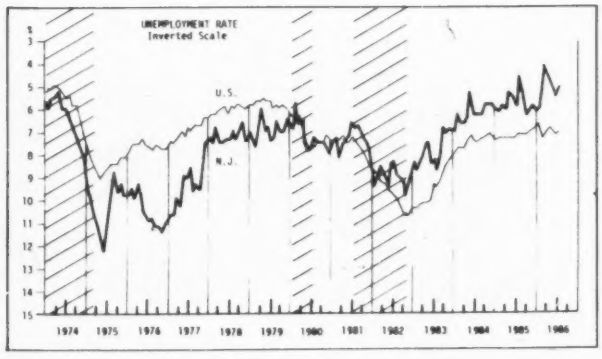
Comparisons of Economic Trends in New Jersey and the United States

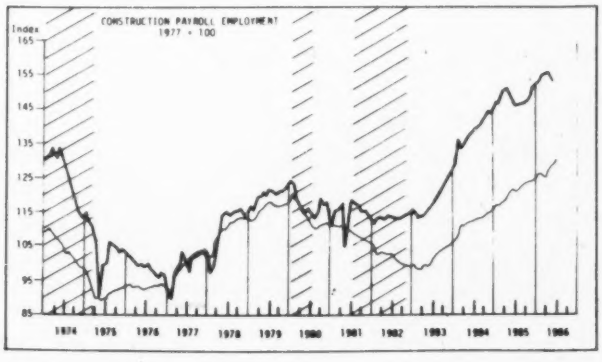




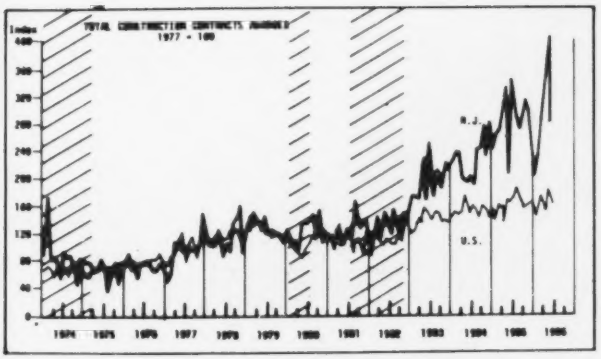


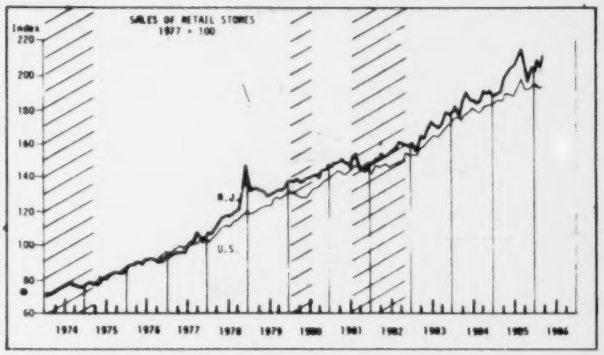


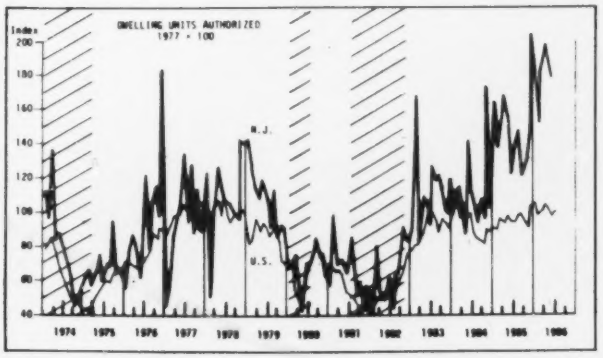


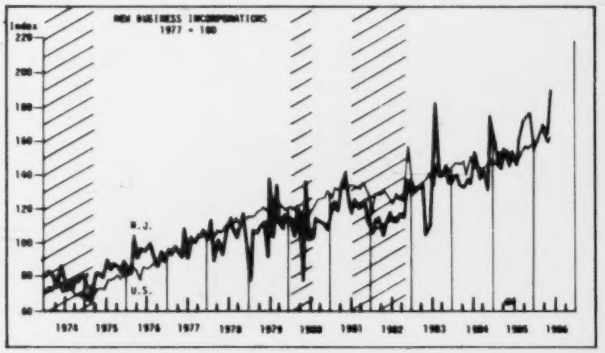


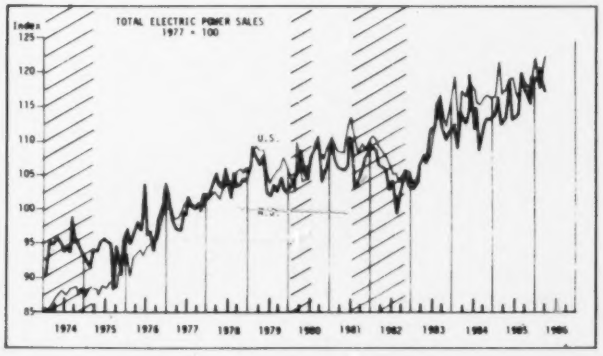
All data in the charts on these two pages have been seasonally adjusted and indexed to a 1977 base with two exceptions. Data on the unemployment rate and manufacturing workweek are presented in actual units. The advantage of using an index is that it facilitates comparisons between the state and the nation. The data for retail sales in New Jersey have been adjusted to take account of sample revisions that caused breaks in the series.

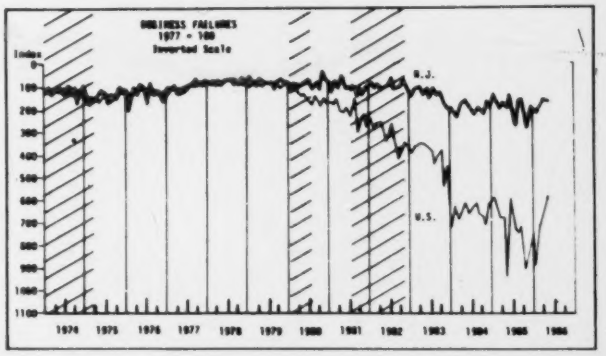












STATISTICAL SECTION

Please Note:

Each year the data series in *Economic Indicators* are revised using new benchmarks and seasonal adjustment factors. For this reason, it would be incorrect to generate an historic time series for *Economic Indicators* data by taking old issues of the *Economic Indicators* and tying the series together.

SEASONAL ADJUSTMENT OF DATA

All charts, except charts I and II and where otherwise noted, contain data seasonally adjusted by the X-11 variant of the U.S. Census Bureau program; multiplicative or additive methods have been used for all series.

Data for 1975 and subsequent years in charts I and II have been seasonally adjusted using the ARIMA (Auto-Regressive Integrated Moving Average) method of seasonal adjustment developed by Statistics Canada.

TABLE NOTES

Preliminary and revised data are indicated by a "p" or "r" after the entry.

CHART NOTES

Unless otherwise noted, all graphs were developed with seasonally adjusted data. Some series were plotted with the following variations noted on the graph itself:

Moving Averages. Series where the monthly data vary erratically have been plotted with moving averages and with nonaveraged data superimposed for the most recent years.

Ratio Scales. Where ratio scales were used to show constant rates of change as straight lines, this has been noted; otherwise, the graph is on an arithmetic scale.

Inverted Scales. For series where declines are associated with economic expansion (such as unemployment and business failures) an inverted scale has been used and noted.

Since the scale of each series is determined by the volume and trend of the data time series, a graph may not be comparable to other graphs on the same or other pages of the report.

MONTHLY AVERAGES

On page S-37 are the monthly averages of the series data for recent years to be used as a benchmark for evaluating current monthly data.

SHADED AREAS

Periods identified by the National Bureau of Economic Research (NBER) as ones of general national contraction have been shaded. They include the periods December 1969-November 1970, November 1973-March 1975, January 1980-July 1980 and July 1981-November 1982.

SERIES SOURCES

1-16	NJ Department of Labor Division of Planning and Research
17	US Bureau of Labor Statistics
18	NJ Department of Labor Division of Planning and Research
19-20	Dun & Bradstreet, Inc.
21	US Department of Energy, Energy Information Administration
22-24	McGraw-Hill Information Systems Company, F.W. Dodge Division
25-27	NJ Department of Labor Division of Planning and Research
28-29	US Bureau of the Census
30	NJ Department of Law & Public Safety Division of Motor Vehicles
31-36	NJ Department of Labor Division of Planning and Research
1-6	The RESIDENT LABOR FORCE INDICATORS are estimated by two different methodologies. The *official series* is based on the U.S. Bureau of Labor Statistics monthly survey of some 2,730 New Jersey households. The *unofficial series* is based on a combination of unemployment insurance claims, employer survey data, estimating formulas, and household survey benchmarks

SERIES NOTES

Both data series are based upon population estimates and weights derived from the 1980 U.S. Census of Population.

Official series data have been adjusted to 1985 population estimates produced by the U.S. Bureau of the Census.

Unofficial series data have been adjusted to a 1985 benchmark.

Estimates for the official series have been revised based on seasonal adjustment factors incorporating the experience of 1985. The unofficial series incorporate the experience of 1985.

The LABOR FORCE PARTICIPATION RATE and the EMPLOYMENT/POPULATION RATIO (Series 4 and 5) are expressed as percentages of the civilian noninstitutional population aged 16 year and over.

The State Employment Security Agency (SESA) agrees to publish the BLS approved estimates of labor force, employment, unemployment and unemployment rate for the State and all published areas, and agrees to label these data as the data used to allocate federal funds and determine eligiblity for federal assistance programs. The SESA reserves the right to publish alternate labor force and unemployment data for State purposes and will suitably label such data so as to distinguish them from the BLS approved series.

7-12 The ESTABLISHMENT EMPLOYMENT INDICATORS are generated from a monthly survey of employers on the number of persons who worked or received pay for any part of the pay period including the 12th of the month. The series are adjusted to March 1985 benchmarks and reflect the 1972 SIC (Standard Industrial Classification Manual) changes. See footnote on page S-31 for change in estimating state government employment.

PRIVATE SECTOR NONFARM PAYROLL EMPLOYMENT (Series 8) is computed by subtracting government employment from total nonfarm payroll employment.

SERVICE-PRODUCING INDUSTRIES PAYROLL EMPLOYMENT (Series 12) includes the industries of trade, services, finance/insurance/real estate, and transportation/communications/public utilities.

13 MANUFACTURING EMPLOYMENT - PRODUCTION WORKERS is developed from a monthly survey of employers on the number of nonsupervisory employees in the manufacturing sector who worked during or received pay for any part of the pay period including the 12th of the month. The series are adjusted to 1985 benchmarks and reflect the 1972 SIC changes.

14 MANUFACTURING WORKWEEK - PRODUCTION WORKERS is derived from a monthly survey of employment and earnings. The workweek is estimated by dividing AGGREGATE MANUFACTURING WEEKLY MANHOURS BY MANUFACTURING EMPLOYMENT - PRODUCTION WORKERS.

15 AGGREGATE MANUFACTURING WEEKLY MANHOURS - PRODUCTION WORKERS are estimated from a monthly survey of the manhours worked by manufacturing production workers.

16 WEEKLY EARNINGS OF MANUFACTURING PRODUCTION WORKERS are affected by premium pay, shift differentials, piecework and incentive payments, length of workweek, and other factors. Data are not seasonally adjusted.

17 The CONSUMER PRICE INDEX (CPI) measures the change in prices of a fixed market basket of goods and services purchased by urban workers. The index represents price changes for everything people buy for living--food, clothing, automobiles, homes, furnishings, fuel, drugs; fees to doctors, lawyers, and beauty shops; and rent, repair costs, transportation fares, public utility rates, etc. All taxes (sales, excise, real estate, etc.) directly associated with the purchase and continued ownership of an item are included in the price. Income and other personal taxes not associated with prices of specific goods are excluded.

The data series reproduced in the report are the *Urban Wage Earners and Clerical Workers* series (CPI-W).

The U.S. CPI is the *U.S. City Average*.

The N.Y. CPI is for the *New York, N.Y.-Northeastern New Jersey* area which includes in New Jersey: Bergen, Essex, Hudson, Middlesex, Morris, Passaic, Somerset, and Union counties; and in New York: New York City, Nassau, Rockland, Suffolk, and Westchester counties.

The Phila. CPI is for the *Philadelphia, Pa.-New Jersey* area which includes in New Jersey: Burlington, Camden, and Gloucester counties; and in Pennsylvania Bucks, Chester, Delaware, Montgomery, and Philadelphia counties.

Questions on the use of the CPI should be addressed to the U.S. Bureau of Labor Statistics offices in New York City (212) 944-312 or in Philadelphia (215) 596-1154.

THERE IS NO NEW JERSEY CONSUMER PRICE INDEX NOR COST-OF-LIVING INDEX.

18 NET SPENDABLE EARNINGS are calculated by adjusting gross average weekly earnings for the effects of state and federal taxes and inflation. Federal tax adjustments are made by the New Jersey Department of Labor according to a formula previously developed by the U.S. Department of Labor. Inflation adjustments are based on the average *Consumer Price Index for Urban Wage Earners and Clerical Workers* in the New York-Northeastern New Jersey and the Philadelphia-New Jersey areas. The data are not seasonally adjusted.

SERIES NOTES

20 Business failures data beginning with January 1984 are not comparable to those prior to that date due to coverage of industries not previously included. Beginning in January 1984, all industries are included in the data.

21 Electric power sales are estimates of total sales of electricity by utility companies to all users (residential, commercial, industrial, public, and other minor categories). They are based on a sample of utilities surveyed by the U.S. Energy Information Administration, as reported in *Electric Power Monthly* (DOE/EIA-0226).

22-24 The CONSTRUCTION CONTRACTS INDICATORS are proprietary data provided by special permission of the F.W. Dodge Division, McGraw-Hill Information Systems Company.

The cumulative data presented in the table on page 3 are not the sum of the data contained in series 22, 23, and 24. The cumulative data contain retroactive revisions made after the monthly data were originally published. The monthly data have not been revised.

TOTAL CONSTRUCTION CONTRACTS AWARDED (Series 22) is not the sum of the published components; it also includes heavy engineering contracts. Series 22 was seasonally adjusted independently and is not the sum of the seasonally adjusted components. For this reason, in some months, the published components may add up to more than the total contracts data (Series 22).

25-27 The RESIDENTIAL BUILDING PERMITS INDICATORS are compiled as of the fifth day of the second following month and are not revised as subsequent reports are received. Since the reports from all New Jersey municipalities are never received by the cutoff date, preliminary figures are used for both the current and the historical series in order to ensure comparability. Final monthly data incorporating late reports appear in the annual summaries of *New Jersey Residential Building Permits*, published by the Division of Planning and Research.

DWELLING UNITS AUTHORIZED BY BUILDING PERMITS (Series 25) data were seasonally adjusted independently and are not the sum of the seasonally adjusted components. For this reason, in some months, the published components may add up to more than the total (Series 25) data.

DWELLING UNITS (5 OR MORE) AUTHORIZED BY BUILDING PERMITS (Series 27) include all multifamily structures with five or more units, except those in public housing. Data do not exhibit a stable seasonal pattern and are therefore not appropriate for seasonal adjustment.

28-29 The figures prior to 1970 for SALES OF RETAIL STORES were adjusted by the New Jersey Department of Labor to account for sample revisions introduced in 1968 by the U.S. Census Bureau.

SERIES NOTES

SALES OF RETAIL STORES IN 1967 DOLLARS (Series 29) has been deflated by the "commodities only" component of the average New York-Northeastern New Jersey and Philadelphia-New Jersey *Consumer Price Index for All Urban Consumers.*

31 WEEKS CLAIMED (WEEKLY AVERAGE) is computed by dividing the total number of weeks claimed (intrastate and interstate agent under Regular UI program only) in the month by the number of weeks in the month. Additive method used to seasonally adjust data.

The INSURED UNEMPLOYMENT RATE (IUR) is the seasonally adjusted weekly average of claimants (intrastate and interstate agent claims under the regular state program only) as a percent of the estimated covered employment.

The current INSURED UNEMPLOYMENT RATE data may not be comparable with earlier data. Beginning with the IUR statistics for the fourth quarter of 1978, the covered employment denominator was inflated by an extension of coverage to approximately 430,000 additional workers which has produced an artificial "deflation" of the IUR statistics. The expanded coverage was phased into the calculations of the official IUR formula in four approximately equal steps effective in October 1978 and in January, April, and July 1979.

32 The INITIAL CLAIMS WEEKLY AVERAGE represents intrastate and interstate agent claims under the regular state UI program only.

33 The UNEMPLOYMENT INSURANCE EXHAUSTIONS are from the regular state program only.

34-36 The industry INSURED UNEMPLOYMENT data are derived from a three percent sample of all claimants under the regular state unemployment insurance program. The data reflect the number of insured unemployed during the week generally containing the 12th of the month, although the data are a count of the claims filed during the subsequent week.

INSURED UNEMPLOYMENT IN SERVICE PRODUCING INDSUTRIES (Series 39) includes the industries of transportation/communications/public utilities, trade, finance/insurance/real estate, and services.

Data on insured unemployment in manufacturing and service-producing industries consist of the sum of the seasonally adjusted or unadjusted data for the respective industry components. The decision to seasonally adjust the component industries is based upon individual consideration of the industries and whether seasonal adjustment is statistically meaningful.

* THE TOTAL NUMBER OF STATE EMPLOYEES REPORTED UNDER THIS HEADING IS DETERMINED ON THE BASIS OF A DEFINITION DEVELOPED BY THE U.S. BUREAU OF LABOR STATISTICS WHICH IS STANDARDIZED THROUGHOUT THE NATION. THE DEFINITION INCLUDES BOTH FULL- AND PART-TIME WORKERS IN THE EXECUTIVE DEPARTMENTS, THE LEGISLATURE, AND THE JUDICIARY, AS WELL AS ALL EMPLOYEES OF AUTHORITIES, COMMISSIONS, THE STATE UNIVERSITY AND OTHER AGENCIES NOT INCLUDED ON THE CENTRAL STATE PAYROLL

** THIS SUB-CATEGORY OF STATE GOVERNMENT EMPLOYMENT IS LIMITED TO FULL-TIME EMPLOYEES OF THE EXECUTIVE DEPARTMENTS, THE LEGISLATURE, AND THE JUDICIARY. THE FIGURES ARE BASED ON THE CENTRAL STATE PAYROLL AND ARE PROVIDED BY THE DEPARTMENT OF TREASURY.

* Data from 1972 forward are not precisely comparable with earlier figures because of SIC revisions. The revisions caused noticeable changes between the original and revised 1972 averages such as lumber (+700), furniture (-500), rubber (+2,000), and instruments (+3,000).

AVERAGE WEEKLY GROSS DOLLAR EARNINGS OF PRODUCTION WORKERS IN NEW JERSEY

Data Notes

Standard errors can be used to construct confidence intervals around each sample estimate. A 68% confidence interval means that, if repeated samples were drawn from the same population, the interval of plus or minus one standard error around each sample estimate would contain, in 68% of the cases, the true value based on a complete census of the population.

The standard errors and coefficients of variation are developed on the basis of past observed variation in New Jersey's sample data. They cannot be applied to seasonally adjusted data because a source of variation, namely seasonal patterns, have already been eliminated by the seasonal adjustment procedure.

Standard errors (S.E.) and coefficient of variation (C.V.) for all years are still based on pre-1985 CPS sample parameters. Revised S.E. and C.V. data will be published after development by BLS.
